

**METHOD AND APPARATUS FOR MAXIMIZING  
STANDBY TIME IN REMOTE STATIONS CONFIGURED TO  
RECEIVE BROADCAST DATABURST MESSAGES**

**ABSTRACT**

A wireless telecommunications system includes a base station, a plurality of remote stations, a first channel for general page messages containing paging information and broadcast databurst message references, and an auxiliary channel for broadcast databurst notification indicators for the purpose of increasing standby time in remote stations configured to receive broadcast databurst messages.
